Market Analysis: Launching a Robot Waiter Café in Los Angeles

Feasibility Study and Data-Driven Strategy

Presented by: Guilherme M

The Business Challenge

Objective: Analyze the gastronomic scenario of Los Angeles to support investment in an innovative coffee shop.

Differential: Use of technology (robot waiters) for service optimization.

Key Question: Where should the business be located and what is the ideal size for the establishment?

Market Panorama in Los Angeles

The market is dominated by restaurants (75%). Coffee shops represent a smaller share, which suggests a niche opportunity with less direct competition than the general food service sector.

Chains vs. Independents

Approximately 38% of establishments in Los Angeles belong to chains. For a boutique, technology-driven coffee shop, the main challenge is competing with the standardization of chains while offering a unique customer experience.

Scale strategy (Many or Large?)

Chains in LA focus on **quantity of small units** (few seats) instead of a few giant units.

For our project, the **"many compact locations"** model appears to be the most sustainable for future scaling.

Seating Capacity by Tipe

Restaurants and Bars (Higher Average)

Have the highest average seating capacities.

Cafes and Bakeries (Smaller and More Intimate)

Are naturally smaller and more intimate.

Our coffee shop must maintain the essence of a “compact unit” to ensure the efficiency of robot waitors areotod espace in optimized.

Strategic Location (Hotspots)

Streets like **Wilshire Blvd**, **Pico Blvd** and **Sunset Blvd** are the main gastronomic corridors.

Being in these streets ensures flow, but the cost of rent is higher. An alternative strategy would be to seek crossroads with high pedestrian traffic.

Conclusions and Next Steps

1 - Business Negócol

Compact cafe (focus on efficiency).

2 - Location

Focus on neighborhoods near tech hubs or major avenues (Wilshire/Sunset).

3 - Diferential Humano-Robotical

Use technology to reduce costs operating tickets, keeping average ticket competitive.
